

# Furniture Anchor

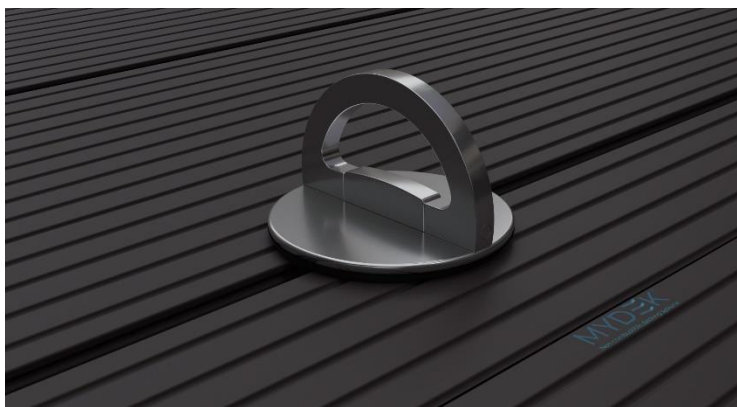

## Technical Data Sheet

### Overview

A simple and secure anchor point compatible with the 20mm decking ranges from MyDek. The furniture anchor from MyDek is designed to work with the full range of aluminium decking boards. Made from recyclable aluminium, the anchor provides an elegant and simple solution to the age-old challenge of furniture being dislodged by high winds at height. Tough enough to withstand wind loadings yet neat and unobtrusive, this clip is simple to fit and can easily be repositioned. With its twist lock and cam-clamp action, it's never been easier to secure your furniture, and it folds down flat when not in use.

### Features:

- Strong
- Lightweight
- Works with Innova, Vista & Delta
- Simple to fit
- Easily repositionable
- Folds flat when not in use

### Dimensions:

Loop	50mm dia
Aperture	16mm
To suit board depth	20mm
Weight	67g

### Material:

Base and Loop	Aluminium grade 1050
---------------	----------------------

### Finish:

Base and Loop	Mill finish
---------------	-------------

### Product Codes:

AFA03	Aluminium Furniture Anchor 50mm
-------	---------------------------------

---

## Strength:

Max permissible loading                      75kg

---

## Applications:

For use on balconies to restrain furniture and other lightweight items.

---

---

## Installation:

Install with twist-to-lock fitment between boards. Works with Inova, Vista and Delta20 decking systems.

Simple to fit and remove.

## Summary

### Safe

All aluminium used to create MyDek is compliant with current industry and manufacturing standards. The products are fully tested for durability, and appropriate loading. All MyDek products are certified to the relevant fire standards.

### Smart

Under normal usage, MyDek is easy to maintain - simply wash the deck surface as needed without abrasive chemicals. MyDek is one of the lowest-maintenance systems available.

### Sustainable

The 60-year service life of the decking systems and ability to be recycled make MyDek a sustainable choice. The longer life cycle reduces the energy required to produce replacements.

Aluminium wastage created through any of the manufacturing processes is fully recyclable and is used to create other aluminium products.
